

REQUEST FOR CITY COUNCIL CONSIDERATION

Meeting Date: November 1, 2021

Agenda Item: 5B	Prepared by: L. Suzanne Pritchard, PLA, AICP, CFM
Agenda Section: Consent: Ordinance. Second Reading	Date: October 21, 2021
Subject: Ordinance to Adopt Revised Flood Damage Control Standards	Division: Planning and Development

Background and Proposal:

The City of North Myrtle Beach adopted its last flood ordinance, Article II. - Flood Damage Control in 1983. Intermittent revisions have been incorporated in the intervening years. To remain compliant with the National Flood Insurance Program (NFIP), the state model ordinance must be adopted or updated with the recommended/required regulations with regard to the last Community Assistance Visit done on July 11, 2019. The revised ordinance will also be beneficial to the City's standing with regard to the Community Rating System (CRS).

Recommended Action:

Approve the ordinance on second reading

Reviewed by Division Head

Reviewed by City Manager

Reviewed by City Attorney

Council Action:

Motion By _____ 2nd By _____ To _____

ORDINANCE

AN ORDINANCE OF THE CITY OF NORTH MYRTLE BEACH PROVIDING THAT THE CODE OF ORDINANCES, CITY OF NORTH MYRTLE BEACH, SOUTH CAROLINA, BE AMENDED BY REVISING CHAPTER 6 - BUILDINGS; CONSTRUCTION; RELATED ACTIVITIES, OF SAID CODE.

BE IT ORDAINED BY THE MAYOR AND COUNCIL OF THE CITY OF NORTH MYRTLE BEACH, SOUTH CAROLINA, IN COUNCIL DULY ASSEMBLED, THAT:

Section 1. That Chapter 6 - BUILDINGS; CONSTRUCTION; RELATED ACTIVITIES, be amended to read as follows (new matter underlined, deleted matter struck-through):

ARTICLE II. -- FLOOD DAMAGE CONTROL

Sec. 6-20. -- Definitions.

Unless specifically defined below, words or phrases used in this article shall be interpreted so as to give the meanings they have in common usage and to give this article its most reasonable application. The following terms shall have the respective meanings ascribed to them:

Addition (to an existing building): Any walled and roofed expansion to the perimeter of a building in which the addition is connected by a common loadbearing wall other than a firewall. Any walled and roofed addition which is connected by a firewall or is separated by independent loadbearing walls is new construction.

Appeal: A request for a review of the code enforcement director's interpretation of any provision of this article or a request for a variance.

Area of shallow flooding: A designated AO or VO zone on the city's flood insurance rate map (FIRM) with base flood depths from one (1) to three (3) feet where a clearly defined channel does not exist, where the path of flooding is unpredictable and indeterminate, and where velocity flow may be evident.

Area of special flood hazard: The land in the floodplain within the city subject to a one (1) percent or greater chance of flooding in any given year.

Base flood: The flood having a one (1) percent chance of being equaled or exceeded in any given year.

Breakaway wall: A wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral forces without causing damage to the elevated portion of the building or supporting foundation.

Building: Any structure built for support, shelter, or enclosure for any occupancy or storage.

Coastal high hazard area: An area of special flood hazard extending from offshore to the inland limit of a primary frontal dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources.

Cost: The fair market value of all expenses for labor and material associated with the construction improvements permitted under this article. Cost shall include a

minimum contractor's profit of ten (10) percent of all costs associated with the construction of the improvement.

Development: Any manmade change to improved or unimproved real estate, including, but not limited to, buildings or other structures, mining, dredging, filling, grading, paving, excavating, drilling operations or permanent storage of materials or equipment.

Elevated building: A nonbasement building built to have the lowest floor elevated above the ground level by means of fill, solid foundation perimeter walls, pilings, columns (posts and piers), shear walls or breakaway walls.

Existing manufactured home park or subdivision: A manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including at a minimum the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before the effective date of the ordinance from which this article is derived.

Expansion to an existing manufactured home park or subdivision: The preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).

Fair market value: The most probable price in a competitive market under all conditions requisite to a fair exchange, with the buyer and seller each acting prudently, knowledgeably and for self interest, and assuming that neither is under duress.

Flood or flooding: A general and temporary condition of partial or complete inundation of normally dry land areas from:

- (1) The overflow of inland or tidal waters;
- (2) The unusual and rapid accumulation of runoff or surface waters from any source.

Flood hazard boundary map (FHBM): An official map of the city issued by the federal emergency management agency, where the boundaries of the areas of special flood hazard have been defined as zone A.

Flood insurance rate map (FIRM): An official map of the city on which the federal emergency management agency has delineated both the areas of special flood hazard and the risk premium zones applicable to the community.

Flood insurance study: The official report provided by the federal emergency management agency. The report contains flood profiles, as well as the flood boundary-floodway map and the water surface elevation of the base flood.

Flood resistant material: Any building material capable of withstanding direct and prolonged contact with floodwaters without sustaining significant damage. The term "prolonged contact" means at least seventy-two (72) hours, and the term "significant damage" means any damage requiring more than low cost cosmetic repair (such as painting).

Floodway: The channel of a river or other watercourse and the adjacent lands that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than one (1) foot.

Floor: The top surface of an enclosed area in a building (including basement), i.e., top of slab in concrete slab construction or top of wood flooring in wood frame construction. The term does not include the floor of a garage used solely for parking vehicles.

Functionally dependent facility: A facility which cannot be used for its intended purpose unless it is located or carried out in close proximity to water, such as a docking or port facility necessary for the loading and unloading of cargo or passengers, shipbuilding, ship repair, or seafood processing facilities. The term does not include long-term storage, manufacture, sales, or service facilities.

Highest adjacent grade: The highest natural elevation of the ground surface, prior to construction, next to the proposed walls of a structure.

Historic structure: Any structure that is:

- (1) Listed individually in the National Register of Historic Places (a listing maintained by the department of interior) or preliminarily determined by the secretary of the interior as meeting the requirements for individual listing on the National Register;
- (2) Certified or preliminarily determined by the secretary of the interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the secretary to qualify as a registered historic district;
- (3) Individually listed on a state inventory of historic places in states with historic preservation programs which have been approved by the secretary of the interior; or
- (4) Individually listed on a local inventory of historic places in communities with historic preservation programs that have been certified either:
 - a. By an approved state program as determined by the secretary of the interior; or
 - b. Directly by the secretary of the interior in states without approved programs.

Lowest floor: The lowest floor of the lowest enclosed area. Any unfinished or flood-resistant enclosure, usable solely for parking of vehicles, building access, or storage in an area other than a basement area is not considered a building's lowest floor provided that such an enclosure is not built so as to render the structure in violation of other provisions of this article.

Manufactured home park or subdivision: A parcel (or continuous parcels) of land divided into two (2) or more manufactured home lots for rent or sale.

Market value: Market value, for the purposes of determining structural value for allowable substantial improvements to a structure, shall be determined by a real estate appraiser licensed or certified by the State of South Carolina using the Uniform Standards of Professional Practice.

Mean sea level: The average height of the sea for all stages of the tide. It is used as a reference for establishing various elevations within the floodplain. For purposes of this article, the term is synonymous with National Geodetic Vertical Datum (NGVD).

Mobile home/manufactured home: A building, transportable in one (1) or more sections, which is built on a permanent chassis and designed to be used with or without a permanent foundation when connected to the required utilities. The term also includes park trailers, travel trailers, and similar transportable structures placed on a site for one hundred eighty (180) consecutive days or longer and intended to be improved property. The term mobile home for the purpose of this article is one and the same as manufactured home.

National Geodetic Vertical Datum (NGVD): As corrected in 1929, a vertical control used as a reference for establishing varying elevations within the floodplain.

New construction: Structures for which the "start of construction" commenced on or after the effective date of the ordinance from which this article is derived.

New mobile home park or mobile home subdivision: A parcel or contiguous parcels of land divided into two (2) or more mobile home lots for rent or sale, for which the construction of facilities for servicing the lot on which the mobile home is to be affixed (including, at a minimum, the installation of utilities, either final site grading or the pouring of concrete pads, and the construction of streets) is completed on or after the effective date of the ordinance from which this article is derived.

Recreational vehicle: A vehicle which is:

- (1) Built on a single chassis;
- (2) Four hundred (400) square feet or less when measured at the largest horizontal projection;
- (3) Designed to be self-propelled or permanently towable by a light duty truck; and
- (4) Designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational, camping, travel or seasonal use.

Sand dunes: Naturally occurring accumulations of sand in ridges or mounds landward of the beach.

Start of construction: (For other than new construction or substantial improvements under the Coastal Barrier Resources Act (P.L. 97-348)), includes substantial improvement and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction or improvement was within one hundred eighty (180) days of the permit date. The actual start means the first placement of permanent construction of a building (including a manufactured home) on a site, such as the pouring of slabs or footings, installation of piles, construction of columns, or any work beyond the stage of excavation or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main building. For a substantial improvement, the actual start of construction means the first alteration of any wall, ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

Structure: A walled and roofed building that is principally above ground, a mobile home, a gas or liquid storage tank, or other manmade facilities or infrastructures.

Substantial damage: Damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damaged condition would equal or exceed fifty (50) percent of the market value of the structure before the damage occurred.

Substantial improvement: Any repair, reconstruction, structural alteration, rehabilitation, addition, or other improvement of a structure, the cost of which equals or exceeds fifty (50) percent of the market value of the structure before the "start of construction" of the improvement. This term includes structures which have incurred "substantial damage," regardless of the actual repair work performed. The term, however, does not include either:

- (1) Any improvement of a structure to correct existing violations of state or local health, sanitary, or safety code which have been identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions, or

~~(2) Any alteration of a structure listed on the National Register of Historic Places on a state inventory of historic places.~~

~~*Variance:* A grant of relief to a person from the requirements of this article which permits construction in a manner otherwise prohibited by this article where specific enforcement would result in unnecessary hardship.~~

~~*Violation:* The failure of a structure or other development to be fully compliant with these regulations.~~

Sec. 6-21. Findings of fact.

- ~~(a) The flood hazard areas of the city are subject to periodic inundation which results in loss of life, property, and health, and causes safety hazards, disruption of commerce and governmental services, extraordinary public expenditures for flood protection and relief, and impairment of the tax base, all of which adversely affect the public health, safety and general welfare.~~
- ~~(b) These flood losses are caused by the cumulative effect of obstructions in floodplains causing increases in flood heights and velocities, and by the occupancy in flood hazard areas by uses vulnerable to floods or hazardous to other lands which are inadequately elevated, floodproofed, or otherwise unprotected from flood damages.~~

Sec. 6-22. Statement of purpose.

~~It is the purpose of this article to promote the public health, safety and general welfare and to minimize public and private losses due to flood conditions in specific areas by provisions designed to:~~

- ~~(1) Restrict or prohibit uses which are dangerous to health, safety and property due to water or erosion hazards, or which result in damaging increases in erosion or in flood heights or velocities;~~
- ~~(2) Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction;~~
- ~~(3) Control the alteration of natural floodplains, stream channels, and natural protective barriers, which are involved in the accommodation of flood waters;~~
- ~~(4) Control filling, grading, dredging, and other development which may increase erosion or flood damage; and,~~
- ~~(5) Prevent or regulate the construction of flood barriers which will unnaturally divert flood waters, or which may increase flood hazards to other lands.~~

Sec. 6-23. Objectives.

~~The objectives of this article are:~~

- ~~(1) To protect human life and health;~~
- ~~(2) To minimize expenditure of public money for costly flood control projects;~~
- ~~(3) To minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;~~
- ~~(4) To minimize prolonged business interruptions;~~
- ~~(5) To minimize damage to public facilities and utilities, such as water and gas mains, electric, telephone, and sewer lines, streets and bridges located in floodplains;~~
- ~~(6) To help maintain a stable tax base by providing for the sound use and development of floodprone areas in such a manner as to minimize future flood blight areas; and,~~

(7) To insure that potential home buyers are notified that property is in a flood area.

~~Sec. 6-24.— Lands to which article applies.~~

~~This article shall apply to all areas of special flood hazard within the jurisdiction of the city. If any part of this article is declared invalid, the remainder of the ordinance shall not be affected and shall remain in force.~~

~~Sec. 6-25.— Basis for establishing the areas of special flood hazard.~~

~~The areas of special flood hazard identified by the Federal Emergency Management Agency in its flood insurance study, September 17, 2003 with accompanying maps and other supporting data, are hereby adopted by reference and declared to be a part of this article.~~

~~Sec. 6-26.— Compliance.~~

~~No structure or land shall hereafter be located, extended, converted, or structurally altered without full compliance with the terms of this article and other applicable regulations.~~

~~Sec. 6-27.— Abrogation and greater restrictions.~~

~~This article is not intended to repeal, abrogate, or impair any existing easements, covenants, or deed restrictions. However, where this article and another regulation conflict or overlap, whichever imposes the more stringent restrictions shall prevail.~~

~~Sec. 6-28.— Interpretation.~~

~~In the interpretation and application of this article, all provisions shall be:~~

- ~~(1) Considered as minimum requirements;~~
- ~~(2) Liberally construed in favor of the governing body; and,~~
- ~~(3) Deemed neither to limit nor repeal any other powers granted under state statutes.~~

~~Sec. 6-29.— Warning and disclaimer of liability.~~

~~The degree of flood protection required by this article is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur on rare occasions. Flood heights may be increased by manmade or natural causes. This article does not imply that land outside the areas of special flood hazard or uses permitted within such areas will be free from flooding or flood damages. This article shall not create liability on the part of the city or by any officer or employee thereof for any flood damages that result from reliance on this article or any administrative decision lawfully made thereunder.~~

~~Sec. 6-30.— Penalties for violation.~~

~~Violation of the provisions of this article or failure to comply with any of its requirements, including violation of conditions and safeguards established in connection with grants of variance or special exceptions, shall constitute a misdemeanor. Any person who violates this article or fails to comply with any of its requirements shall, upon conviction thereof, be as provided in section 1-6. Each day such violation continues shall be considered a separate offense. Nothing herein contained shall prevent the city from taking such other lawful action as is necessary to prevent or remedy any violation.~~

~~Sec. 6-31.— Designation of city manager to administer article.~~

The city manager, and/or his or her designee, is hereby appointed to administer and implement the provisions of this article.

Sec. 6-32. — Development permit — Required.

A development permit shall be required in conformance with the provisions of this article prior to the commencement of any development activities.

Sec. 6-33. — Same — Procedures.

Application for a development permit shall be made to the code enforcement director on forms furnished by such director, prior to any development activities, and may include, but not be limited to, the following plans in duplicate drawn to scale showing the nature, location, dimensions, and elevations of the areas in question; existing or proposed structures, fill, storage of materials; drainage facilities; and the location of the foregoing. Specifically, the following information is required:

- (1) Elevation in relation to mean sea level of the proposed lowest floor (including basement) of all structures.
- (2) Elevation in relation to mean sea level to which any nonresidential structure will be floodproofed.
- (3) Provide a certificate from a registered professional engineer or architect that the nonresidential floodproofed structure meets the floodproofing criteria in section 6-37(2).
- (4) Description of the extent to which any watercourse will be altered or relocated as a result of proposed development.
- (5) Provide a floor elevation or floodproofing certification after the lowest floor is completed, or in instances where the structure is subject to the regulations applicable to coastal high hazard areas, after placement of the horizontal structural members of the lowest floor. Within twenty one (21) calendar days of establishment of the lowest floor elevation, or floodproofing by whatever construction means, or upon placement of the horizontal structural members of the lowest floor, whichever is applicable, it shall be the duty of the permit holder to submit to the code enforcement director, a certification of the elevation of the lowest floor, floodproofed elevation, or the elevation of the lowest portion of the horizontal structural members of the lowest floor, whichever is applicable, as built, in relation to mean sea level. Said certification shall be prepared by or under the direct supervision of a registered land surveyor or professional engineer and certified by same. When floodproofing is utilized for a particular building, said certification shall be prepared by or under the direct supervision of a professional engineer or architect and certified by same. Any work done within the twenty one day calendar period and prior to submission of the certification shall be at the permit holder's risk. The code enforcement director shall review the floor elevation survey data submitted. Deficiencies detected by such review shall be corrected by the permit holder immediately and prior to further progressive work being permitted to proceed. Failure to submit the survey or failure to make said corrections required hereby, shall be cause to issue a stop work order for the project.

Sec. 6-34. — Duties and responsibilities of code enforcement director.

Duties of the code enforcement director shall include, but not be limited to:

- (1) Review all development permits to assure that the permit requirements of this article have been satisfied.

- ~~(2) Advise permittee that additional federal or state permits may be required, and if specific federal or state permits are known, require that copies of such permits be provided and maintained on file with the development permit.~~
- ~~(3) Notify adjacent communities and the state resources commission prior to any alteration or relocation of a watercourse, and submit evidence of such notification to the federal emergency management agency.~~
- ~~(4) Assure that maintenance is provided within the altered or relocated portion of said watercourse so that the flood-carrying capacity is not diminished.~~
- ~~(5) Verify and record the actual elevation (in relation to mean sea level) of the lowest floor (including basement) of all new or substantially improved structures, in accordance with section 6-33(5).~~
- ~~(6) Verify and record the actual elevation (in relation to mean sea level) to which the new or substantially improved structures have been floodproofed, in accordance with section 6-33(5).~~
- ~~(7) In coastal high hazard areas certification shall be obtained from a registered professional engineer or architect that the structure is securely anchored to adequately anchored pilings or columns in order to withstand velocity waters and hurricane wave wash.~~
- ~~(8) In coastal high hazard areas the code enforcement director shall review plans for adequacy of breakaway walls in accordance with section 6-37(4)(h).~~
- ~~(9) When floodproofing is utilized for a particular structure, the code enforcement director shall obtain certification from a registered professional engineer or architect.~~
- ~~(10) Where interpretation is needed as to exact location of boundaries of the areas of special flood hazard (for example, where there appears to be a conflict between a mapped boundary and actual field conditions) the code enforcement director shall make the necessary interpretation. The person contesting the location of the boundary shall be given a reasonable opportunity to appeal the interpretation as provided in this article.~~
- ~~(11) When base flood elevation data has not been provided in accordance with section 6-25, then the code enforcement director shall obtain, review, and reasonably utilize any base flood elevation data available from a federal, or other source, in order to administer the provisions of sections 6-36, 6-37 and 6-38.~~
- ~~(12) All records pertaining to the provisions of this article shall be maintained in the office of the code enforcement director and shall be open for public inspection.~~

Sec. 6-35. Variance and appeal procedures.

- ~~(a) The board of zoning appeals as established by the city shall hear and decide appeals and requests for variances from the requirements of this article.~~
- ~~(b) The board of zoning appeals shall hear and decide appeals when it is alleged there is an error in any requirement, decision, or determination made by the code enforcement director in the enforcement or administration of this article.~~
- ~~(c) Any person aggrieved by the decision of the board of zoning appeals or any taxpayer may appeal such decision to the circuit court in and for this county, as provided by state law.~~
- ~~(d) Variances may be issued for the reconstruction, rehabilitation or restoration of structures listed on the national register of historic places or the state inventory~~

- of historic places without regard to the procedures set forth in the remainder of this section.
- (e) ~~In passing upon such applications, the board of zoning appeals shall consider all technical evaluations, all relevant factors, all standards specified in other sections of this article, and:~~
- ~~(1) The danger that materials may be swept onto other lands to the injury of others;~~
 - ~~(2) The danger to life and property due to flooding or erosion damage;~~
 - ~~(3) The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owner;~~
 - ~~(4) The importance of the services provided by the proposed facility to the community;~~
 - ~~(5) The necessity to the facility of a waterfront location, where applicable;~~
 - ~~(6) The availability of alternative locations; not subject to flooding or erosion damage, for the proposed use;~~
 - ~~(7) The compatibility of the proposed use with existing and anticipated development;~~
 - ~~(8) The relationship of the proposed use to the comprehensive plan and floodplain management program for that area;~~
 - ~~(9) The safety of access to the property in times of flood for ordinary and emergency vehicles;~~
 - ~~(10) The expected heights, velocity, duration, rate of rise and sediment transport of the floodwaters and the effects of wave action, if applicable at the site; and;~~
 - ~~(11) The costs of providing governmental services during and after flood conditions, including maintenance and repair of public utilities and facilities such as sewer, gas, electrical, and water systems, and streets and bridges.~~
- (f) ~~Upon consideration of the factors listed above and the purposes of this article, the board of zoning appeals may attach such conditions to the granting of variances as it deems necessary to further the purposes of this article.~~
- (g) ~~Variances shall not be issued within any designated floodway if any increase in flood levels during the base flood discharge would result.~~
- (h) ~~Conditions for variances:~~
- ~~(1) Variances shall only be issued upon determination that the variance in the minimum necessary, considering the flood hazard, to afford relief;~~
 - ~~(2) Variances shall only be issued upon:~~
 - ~~(i) A showing of good and sufficient cause;~~
 - ~~(ii) A determination that failure to grant the variance would result in exceptional hardship to the applicant; and,~~
 - ~~(iii) A determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisance, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.~~
 - ~~(3) Any applicant to whom a variance is granted shall be given written notice specifying the difference between the base flood elevation and the elevation to which the structure is to be built and stating that the cost of flood insurance will be commensurate with the increased risk resulting from the reduced lowest floor elevation.~~

(4) The code enforcement director shall maintain the records of all appeal actions and report any variances to the federal emergency management agency upon request.

(i) Each written application for a variance shall be accompanied by a fee of fifty dollars (\$50.00). Such an application shall reflect the type of structures for which a variance is sought, the sizes of the structures, the approximate locations upon the parcel, and the intended uses thereof.

Sec. 6-36. Provisions for flood hazard reduction—General.

In all areas of special flood hazard the following provisions are required:

- (1) All new construction and substantial improvements shall be anchored to prevent flotation, collapse or lateral movement of the structure;
- (2) All new construction and substantial improvements shall be constructed with materials and utility equipment resistant to flood damage;
- (3) All new construction or substantial improvements shall be constructed by methods and practices that minimize flood damage;
- (4) All new and replacement water supply systems shall be designed to minimize or eliminate infiltration of floodwaters into the system;
- (5) New and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of floodwaters into the systems and discharges from the systems into floodwaters;
- (6) On-site waste disposal systems shall be located and constructed to avoid impairment to them or contamination from them during flooding;
- (7) Any alteration, repair, reconstruction, or improvements to a structure which is in compliance with the provisions of this article shall meet the requirements of "new construction" as contained in this article.
- (8) Manufactured homes shall be anchored to prevent flotation, collapse or lateral movement. Methods of anchoring may include, but are not limited to, use of over the top or frame ties to ground anchors. This standard shall be in addition to and consistent with applicable state requirements for resisting wind forces.
- (9) Electrical, heating, ventilation, plumbing, air conditioning equipment, and other service facilities shall be designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding.

Sec. 6-37. Same—Specific standards.

In all areas of special flood hazard where base flood elevation data has been provided, as set forth in [section 6-25](#) or [section 6-34](#), the following provisions are required:

- (1) *Residential construction:* New construction or substantial improvement of any residential building (or manufactured home) shall have the lowest floor, including basement, elevated no lower than one (1) foot above the base flood elevation. Should solid foundation perimeter walls be used to elevate a structure, openings sufficient to facilitate the unimpeded movements of floodwaters shall be provided in accordance with subsection (3) below.
 - (a) Plans submitted for new construction or substantial improvement of residential buildings in zones A, AE shall indicate methods of design structural resistance of the building to resist flotation, collapse, and lateral movement due to the effect of wind and water loads acting

~~simultaneously on all building components. Wind loading values shall be in accordance with the Southern Standard Building Code, 1997 Edition.~~

~~(i) New manufactured homes placed in zones A, AE shall be required to be elevated on structural components designed to elevate the manufactured home above the base flood elevation.~~

~~(ii) Reserved.~~

~~(b) Reserved.~~

~~(2) *Nonresidential construction:* Except as provided for in section (b) below, new construction or substantial improvement of any commercial, industrial or other nonresidential building or manufactured home shall have the lowest floor, including basement, elevated no lower than one (1) foot above the level of the base flood elevation. Building located in all A zones may be floodproofed in lieu of being elevated, provided that all areas of the building below the required elevation are watertight with walls substantially impermeable to the passage of water, and use structural components having the capability of resisting hydrostatic and hydrodynamic loads and the effects of buoyancy. A registered professional engineer or architect shall certify that the standards of this subsection are satisfied. Such certification shall be provided to the official as set forth in section 6-33.~~

~~(a) Plans submitted for all new construction or substantial improvements of any nonresidential, commercial, industrial or other nonresidential building or manufactured home in zones A, AE shall have structural plans prepared by a professional engineer or architect, and plans shall indicate methods of design structural resistance of the building to resist flotation, collapse and lateral movement due to the effect of wind and water loads acting simultaneously on all building components.~~

~~(b) Unelevated low cost small detached accessory building structures such as small metal or wooden may be placed in flood areas other than designated coastal high hazard areas. These structures are permitted provided all of the following conditions are met:~~

~~(i) A maximum floor space of one hundred (100) square feet.~~

~~(ii) Valuation of one thousand five hundred dollars (\$1,500.00) or less.~~

~~(iii) Be unfinished on the interior.~~

~~(iv) Constructed of flood resistant materials.~~

~~(v) Used only for storage.~~

~~(vi) Be firmly anchored by over the top straps, cables, foundation anchorbolts or other such means as may be approved by the building official to prevent flotation.~~

~~(vii) Mandatory openings required in section 6-37(3)(a)(i)(ii)(iii) to resist flotation and buoyancy or other such means as may be approved by the building official.~~

~~(3) *Elevated buildings.* New construction or substantial improvements of elevated buildings that include fully enclosed areas formed by foundation and other exterior walls below the base flood elevation shall be designed to preclude finished living space and designed to allow for the entry and exit of flood waters to automatically equalize hydrostatic flood forces on exterior walls.~~

- (a) ~~Designs for complying with this requirements must either be certified by a professional engineer or architect or meet the following minimum criteria:
 - (i) ~~Provide a minimum of two (2) openings having a total net area of not less than one (1) square inch for every square foot of enclosed area subject to flooding;~~
 - (ii) ~~The bottom of all openings shall be no higher than one (1) foot above grade; and~~
 - (iii) ~~Openings may be equipped with screens, louvers, valves or other coverings or devices provided they permit the automatic flow of flood waters in both directions.~~~~
- (b) ~~Access to the enclosed area shall be the minimum necessary to allow for parking of vehicles (garage door) or limited storage of maintenance equipment used in connection with the premises (standard exterior door) or entry to the living area (stairway or elevator); and the interior portion of such enclosed area shall not be partitioned or finished into separate rooms.~~
- (c) ~~Electrical, plumbing and other utility connections are prohibited below one (1) foot above the base flood elevation.~~
- (4) ~~Standards for manufactured homes and recreational vehicles:
 - (a) ~~All manufactured homes placed, or substantially improved, on individual lots or parcels, in expansions to existing manufactured home parks or subdivisions, or in substantially improved manufactured home parks or subdivisions must meet all the requirements for new construction, including elevation and anchoring.~~
 - (b) ~~All manufactured homes placed or substantially improved in an existing manufactured home park or subdivision must be elevated so that:
 - (i) ~~The lowest floor of the manufactured home is elevated no lower than one (1) foot above the level of the base flood elevation; or~~
 - (ii) ~~The manufactured home chassis is supported by reinforced piers or other foundation elements of at least an equivalent strength, of no less than thirty-six (36) inches in height above grade;~~
 - (iii) ~~The manufactured home must be securely anchored to the adequately anchored foundation system to resist flotation, collapse and lateral movement;~~
 - (iv) ~~In an existing manufactured home park or subdivision on which a manufactured home has incurred "substantial damage" as the result of a flood, any manufactured home placed or substantially improved must meet the standards of section 6-36, section 6-37(4)(b)(i) and (iii) above to insure the unit will meet all requirements for new construction.~~~~
 - (c) ~~All recreational vehicles placed on sites must either:
 - (i) ~~Be fully licensed and ready for highway use; or~~
 - (ii) ~~The recreational vehicle must meet all the requirements for new construction, including anchoring and elevation requirements of section 6-36, section 6-37(4)(a) or (b)(i), (iii) above. A recreational vehicles is ready for highway use if it is on its wheels or jacking system, is attached to the site only by quick disconnect~~~~~~

~~type utilities and security devices and has no permanently attached structures.~~

~~(5) Coastal high hazard areas (V zones): Areas located within the areas of special flood hazard established in section 6-25 are areas designated as coastal high hazard areas. These areas have special flood hazards associated with them; therefore, the following provisions shall apply:~~

- ~~(a) With the exception of fishing piers, all new construction and substantial improvements of buildings or structures shall be located landward of the reach of the mean high tide;~~
- ~~(b) All new construction and substantial improvements of buildings or structures shall be elevated so that the lowest supporting horizontal structural member (excluding pilings or columns) is located on lower than one (1) foot above the base flood elevation level, with all space below the lowest supporting member open so as not to impede the flow of water. Open lattice work, decorative screening or breakaway walls may be permitted, provided that such are constructed with the intent and ability to collapse without jeopardizing the structural support of the building in the event of abnormal wave action and in accordance with subparagraph (h) of this subsection(s);~~
- ~~(c) All new construction and substantial improvements of buildings or structures shall be securely anchored on pilings or columns;~~
- ~~(d) All pipe and column foundations and structures attached thereto shall be anchored to resist flotation, collapse and lateral movement due to the effect of wind and water loads acting simultaneously on all building components. Water loading values shall equal or exceed the base flood. Wind loading values shall be in accordance with the International Building Code, 2006 Edition and the International Residential Code, 2003 Edition;~~
- ~~(e) In V zones, compliance with provisions contained in subparagraphs (b), (c) and (d) of subsection 6-37(5) shall be certified by a professional engineer or architect;~~
- ~~(f) In V zones, there shall be no fill used as structural support;~~
- ~~(g) There shall be no alteration of sand dunes or natural vegetation which would increase potential flood damage;~~
- ~~(h) Lattice work, decorative screening and breakaway walls shall be allowed below the base flood elevation, provided they are intended to collapse under wind and water loads without causing collapse, displacement, or other structural damage to the elevated portion of the building or supporting foundation system. For the purpose of this section, a breakaway wall shall have a design safe loading resistance of not less than ten (10) and no more than twenty (20) pounds per square foot. Use of breakaway walls which exceed a design safe loading resistance of twenty (20) pounds per square foot may be permitted if a registered engineer or architect certifies that the design proposed meets the following:
 - ~~(i) Breakaway wall collapse shall result from a water load less than that which would occur during the base flood; and~~
 - ~~(ii) The elevated portion of the building and supporting foundation system shall not be subject to collapse, displacement, or other~~~~

structural damage due to the effects of wind and water loads acting simultaneously on all building components (structural and nonstructural). Water loading values shall be those associated with the base flood, wind loading values used shall be those required [by] the Southern Standard Building code, 1994 Edition.

- ~~(i) Where lattice work, decorative screening, or breakaway walls are utilized, such enclosed space shall be usable solely for parking of vehicles, building access or storage.~~
- ~~(j) Prior to construction, plans for any buildings that will have lattice work or decorative screening must be submitted to the code enforcement director for approval;~~
- ~~(k) Any alteration, repair, reconstruction or improvement to a structure shall not enclose the space below the base flood elevation except with lattice work, decorative screen, or breakaway walls as provided for in section 6-37(5)(h).~~
- ~~(l) A replacement manufactured home may be placed on a lot in an existing manufactured home park or subdivision, provided the requirements of section 6-37(4)(b)(i), (ii), (iii) are met. A manufactured home placed on a site on which a manufactured home has incurred substantial damage as a result of flood must meet all the standards for new construction.~~
- ~~(m) Recreational vehicles shall not be permitted within the coastal high hazard areas (V zones).~~

~~Sec. 6-38. Same Standards for subdivision proposals.~~

- ~~(a) All subdivision proposals shall be consistent with the need to minimize flood damage;~~
- ~~(b) All subdivision proposals shall have public utilities and facilities, such as sewer, gas, electrical, and water systems located and constructed to minimize flood damage;~~
- ~~(c) All subdivision proposals shall have adequate drainage provided to reduce exposure to flood hazards; and,~~
- ~~(d) Base flood elevation data shall be provided for subdivision proposals and other proposed development which is greater than the lesser of fifty (50) lots or five (5) acres.~~

ARTICLE II. - FLOOD DAMAGE PREVENTION ORDINANCE

Section 6-20. - General Standards.

A. Statutory Authorization

Municipality - The Legislature of the State of South Carolina has in SC Code of Laws, Title 5 and Title 6, and amendments thereto, delegated the responsibility to local governmental units to adopt regulations designed to promote the public health, safety, and general welfare of its citizenry. Therefore, the City of North Myrtle Beach, South Carolina does ordain as follows:

B. Findings of Fact - The Special Flood Hazard Areas of the City of North Myrtle Beach are subject to periodic inundation which results in loss of life, property,

health and safety hazards, disruption of commerce and governmental services, extraordinary public expenditures of flood protection and relief, and impairment of the tax base, all of which adversely affect the public health, safety, and general welfare.

Furthermore, these flood losses are caused by the cumulative effect of obstructions in floodplains causing increases in flood heights and velocities, and by the occupancy in flood hazard areas by uses vulnerable to floods or hazardous to other lands which are inadequately elevated, floodproofed, or otherwise unprotected from flood damages.

C. *Statement of Purpose and Objectives* - It is the purpose of this ordinance to protect human life and health, minimize property damage, and encourage appropriate construction practices to minimize public and private losses due to flood conditions by requiring that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction. Uses of the floodplain which are dangerous to health, safety, and property due to water or erosion hazards, or which increase flood heights, velocities, or erosion are restricted or prohibited. These provisions attempt to control the alteration of natural floodplains, stream channels, and natural protective barriers which are involved in the accommodation of flood waters, and control filling, grading, dredging and other development which may increase flood damage or erosion. Additionally, the ordinance prevents or regulates the construction of flood barriers which will unnaturally divert floodwaters, or which may increase flood hazards to other lands.

The objectives of this ordinance are to protect human life and health, to help maintain a stable tax base by providing for the sound use and development of flood-prone areas in such a manner as to minimize flood blight areas, and to insure that potential home buyers are notified that property is in a flood area. The provisions of the ordinance are intended to minimize damage to public facilities and utilities such as water and gas mains, electric, telephone, and sewer lines, streets and bridges located in the floodplain, and prolonged business interruptions. Also, an important floodplain management objective of this ordinance is to minimize expenditure of public money for costly flood control projects and rescue and relief efforts associated with flooding.

Floodplains are an important asset to the community. They perform vital natural functions such as temporary storage of floodwaters, moderation of peak flood flows, maintenance of water quality, groundwater recharge, prevention of erosion, habitat for diverse natural wildlife populations, recreational opportunities, and aesthetic quality. These functions are best served if floodplains are kept in their natural state. Wherever possible, the natural characteristics of floodplains and their associated wetlands and water bodies should be preserved and enhanced. Decisions to alter floodplains, especially floodways and stream channels, should be the result of careful planning processes that evaluate resource conditions and human needs.

D. *Lands to Which this Ordinance Applies* - This ordinance shall apply to all areas of special flood hazard within the jurisdiction of the City of North Myrtle Beach as

identified by the Federal Emergency Management Agency (FEMA) in its Flood Insurance Study, dated December 16, 2021, with accompanying maps and other supporting data that are hereby adopted by reference and declared to be a part of this ordinance.

Upon annexation, any special flood hazard areas identified by the Federal Emergency Management Agency (FEMA) in its Flood Insurance Study for the unincorporated areas of Horry County, with accompanying map and other data are adopted by reference and declared part of this ordinance.

- E. *Establishment of Development Permit* - A Development Permit shall be required in conformance with the provisions of this ordinance prior to the commencement of any development activities.
- F. *Compliance* - No structure or land shall hereafter be located, extended, converted, or structurally altered without full compliance with the terms of this ordinance and other applicable regulations.
- G. *Interpretation* - In the interpretation and application of this ordinance, all provisions shall be considered as minimum requirements, liberally construed in favor of the governing body, and deemed neither to limit nor repeal any other powers granted under State law. This ordinance is not intended to repeal, abrogate, or impair any existing easements, covenants, or deed restrictions. However, where this ordinance and another conflict or overlap, whichever imposes the more stringent restrictions, shall prevail.
- H. *Partial Invalidity and Severability* - If any part of this Ordinance is declared invalid, the remainder of the Ordinance shall not be affected and shall remain in force.
- I. *Warning and Disclaimer of Liability* - The degree of flood protection required by this ordinance is considered reasonable for regulatory purposes and is based on scientific and engineering consideration. Larger floods can and will occur on rare occasions. Flood heights may be increased by man-made or natural causes. This ordinance does not imply that land outside the areas of special flood hazard or uses permitted within such areas will be free from flooding or flood damages. This ordinance shall not create liability on the part of the City of North Myrtle Beach or by any officer or employee thereof for any flood damages that result from reliance on this ordinance, or any administrative decision lawfully made hereunder.
- J. *Penalties for Violation* - Violation of the provisions of this ordinance or failure to comply with any of its requirements, including violation of conditions and safeguards established in connection with grants of variance or special exceptions, shall constitute a misdemeanor. Any person who violates this ordinance or fails to comply with any of its requirements shall, upon conviction thereof, be fined not more than \$500.00 or imprisoned for not more than 30 days, or both. Each day the violation continues shall be considered a separate offense. Nothing herein contained shall prevent the City of North Myrtle Beach from taking such other lawful action as is necessary to prevent or remedy any violation.

Section 6-21. – Definitions

- A. General - Unless specifically defined below, words or phrases used in this ordinance shall be interpreted to give them the meaning they have in common usage and to give this ordinance its most reasonable application.
1. *Accessory structure (appurtenant structure)* - structures that are located on the same parcel of property as the principal structure and the use of which is incidental to the use of the principal structure. Accessory Structures should constitute a minimal investment (no more than 10% of the value of the primary structure), may not be used for human habitation, and be designed to have minimal flood damage potential. Examples of accessory structures are detached garages, carports, storage sheds, pole barns, and hay sheds.
 2. *Addition (to an existing building)* - an extension or increase in the floor area or height of a building or structure. Additions to existing buildings shall comply with the requirements for new construction regardless as to whether the addition is a substantial improvement or not. Where a firewall or load-bearing wall is provided between the addition and the existing building, the addition(s) shall be considered a separate building and must comply with the standards for new construction.
 3. *Agricultural structure* - a structure used solely for agricultural purposes in which the use is exclusively in connection with the production, harvesting, storage, drying, or raising of agricultural commodities, including the raising of livestock. Agricultural structures are *not* exempt from the provisions of this ordinance.
 4. *Appeal* - a request for a review of the local floodplain administrator's interpretation of any provision of this ordinance.
 5. *Area of shallow flooding* - a designated AO or VO Zone on a community's Flood Insurance Rate Map (FIRM) with base flood depths of one to three feet where a clearly defined channel does not exist, where the path of flooding is unpredictable and indeterminate, and where velocity flow may be evident.
 6. *Area of special flood hazard* - the land in the floodplain within a community subject to a one percent or greater chance of being equaled or exceeded in any given year.
 7. *Base flood* - the flood having a one percent chance of being equaled or exceeded in any given year.
 8. *Basement* - means any enclosed area of a building that is below grade on all sides.
 9. *Building* - see structure.

10. Coastal High Hazard Area - an area of special flood hazard extending from offshore to the inland limit of the primary frontal dune along an open coast and any other area subject to velocity wave action from storms or seismic sources.
11. Critical development – development that is critical to the community’s public health and safety, is essential to the orderly functioning of a community, store or produce highly volatile, toxic or water-reactive materials, or house occupants that may be insufficiently mobile to avoid loss of life or injury. Examples of critical development include jails, hospitals, schools, fire stations, nursing homes, wastewater treatment facilities, water plants, and gas/oil/propane storage facilities.
12. Development - any man-made change to improved or unimproved real estate, including, but not limited to, buildings or other structures, mining, dredging, filling, grading, paving, excavation or drilling operations, or storage of equipment or materials.
13. Elevated building - a non-basement building built to have the lowest floor elevated above the ground level by means of solid foundation perimeter walls, pilings, columns, piers, or shear walls parallel to the flow of water.
14. Executive Order 11988 (Floodplain Management) - Issued by President Carter in 1977, this order requires that no federally assisted activities be conducted in or have the potential to affect identified special flood hazard areas, unless there is no practicable alternative.
15. Existing construction - means, for the purposes of determining rates, structures for which the start of construction commenced before October 14, 1977.
16. Existing manufactured home park or manufactured home subdivision - a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before March 15, 1983.
17. Expansion to an existing manufactured home park or subdivision - the preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete slabs).
18. Flood - a general and temporary condition of partial or complete inundation of normally dry land areas from the overflow of inland or tidal waters, or the unusual and rapid accumulation of runoff of surface waters from any source.
19. Flood Hazard Boundary Map (FHBM) - an official map of a community,

issued by the Federal Emergency Management Agency, where the boundaries of the areas of special flood hazard have been defined as Zone A.

20. *Flood Insurance Rate Map (FIRM)* - an official map of a community, on which the Federal Emergency Management Agency has delineated both the areas of special flood hazard and the risk premium zones applicable to the community.
21. *Flood Insurance Study* - the official report provided by the Federal Emergency Management Agency which contains flood profiles, as well as the Flood Boundary Floodway Map and the water surface elevation of the base flood.
22. *Flood-resistant material* - any building material capable of withstanding direct and prolonged contact (minimum 72 hours) with floodwaters without sustaining damage that requires more than low-cost cosmetic repair. Any material that is water-soluble or is not resistant to alkali or acid in water, including normal adhesives for above-grade use, is not flood-resistant. Pressure-treated lumber or naturally decay-resistant lumbers are acceptable flooring materials. Sheet-type flooring coverings that restrict evaporation from below and materials that are impervious, but dimensionally unstable are not acceptable. Materials that absorb or retain water excessively after submergence are not flood resistant. Please refer to *Technical Bulletin 2, Flood Damage-Resistant Materials Requirements*, available from the Federal Emergency Management Agency. Class 4 and 5 materials, referenced therein, are acceptable flood-resistant materials.
23. *Floodway* - the channel of a river or other watercourse and the adjacent land areas that must be reserved to discharge the base flood without cumulatively increasing the water surface elevation more than one foot.
24. *Freeboard* - a factor of safety usually expressed in feet above a flood level for purposes of floodplain management. "Freeboard" tends to compensate for the many unknown factors that could contribute to flood heights greater than the height calculated for a selected size flood and floodway conditions, such as wave action, bridge openings, and the hydrological effect of urbanization of the watershed.
25. *Functionally dependent use* - a use which cannot perform its intended purpose unless it is located or carried out in close proximity to water. The term includes only docking facilities, port facilities that are necessary for the loading and unloading of cargo or passengers, and ship building and ship repair facilities, but does not include long-term storage or related manufacturing facilities.
26. *Highest Adjacent Grade* - the highest natural elevation of the ground surface, prior to construction, next to the proposed walls of the structure.
27. *Historic Structure* - any structure that is: (a) listed individually in the

National Register of Historic Places (a listing maintained by the U.S. Department of the Interior (DOI)) or preliminarily determined by the Secretary of the Interior as meeting the requirements for individual listing on the National Register; (b) certified or preliminarily determined by the Secretary of the Interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the Secretary to qualify as a registered historic district; (c) individually listed on a State inventory of historic places; (d) individually listed on a local inventory of historic places in communities with historic preservation programs that have been certified (1) by an approved State program as determined by the Secretary of Interior, or (2) directly by the Secretary of Interior in states without approved programs. Some structures or districts listed on the State or local inventories *MAY NOT* be "Historic" as cited above but have been included on the inventories because it was believed that the structures or districts have the *potential* for meeting the "Historic" structure criteria of the DOI. For these structures to meet NFIP historic structure criteria, it must be demonstrated and evidenced that the South Carolina Department of Archives and History has *individually determined* that the structure or district meets DOI historic structure criteria.

28. *Increased Cost of Compliance (ICC)* - applies to all new and renewed flood insurance policies effective on and after June 1, 1997. The NFIP shall enable the purchase of insurance to cover the cost of compliance with land use and control measures established under Section 1361. It provides coverage for the payment of a claim to help pay for the cost to comply with State or community floodplain management laws or ordinances after a flood event in which a building has been declared substantially or repetitively damaged.
29. *Limited storage* - an area used for storage and intended to be limited to incidental items that can withstand exposure to the elements and have low flood damage potential. Such an area must be of flood resistant or breakaway material, void of utilities except for essential lighting and cannot be temperature controlled. If the area is located below the base flood elevation in an A, AE and A1-A30 zone it must meet the requirements of section 6-23.B.4 of this ordinance. If the area is located below the base flood elevation in a V, VE and V1-V30 zone it must meet the requirements of section 6-23.F of this ordinance.
30. *Lowest Adjacent Grade (LAG)* - is an elevation of the lowest ground surface that touches any structurally attached deck support, exterior walls of a building or proposed building walls.
31. *Lowest Floor* - the lowest floor of the lowest enclosed area (including basement). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access or storage in an area other than a basement area is not considered a building's lowest floor; provided, that such enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of this ordinance.

32. *Manufactured home* - a structure, transportable in one or more sections, which is built on a permanent chassis and designed to be used with or without a permanent foundation when connected to the required utilities. The term "manufactured home" does not include a "recreational vehicle".
33. *Manufactured Home Park or subdivision* - a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.
34. *Mean Sea Level* - means, for the purpose of this ordinance, the National Geodetic Vertical Datum (NGVD) of 1929, North American Vertical Datum (NAVD) of 1988, or other datum, to which the base flood elevations shown on a community's Flood Insurance Rate Maps (FIRM) are shown.
35. *National Geodetic Vertical Datum (NGVD) of 1929* - as corrected in 1929, elevation reference points set by the National Geodetic Survey based on mean sea level.
36. *North American Vertical Datum (NAVD) of 1988* - vertical control, as corrected in 1988, used as the reference datum on Flood Insurance Rate Maps.
37. *New construction* - structure for which the start of construction commenced on or after March 15, 1983. The term also includes any subsequent improvements to such structure.
38. *New manufactured home park or subdivision* - a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete slabs) is completed on or after March 15, 1983.
39. *Primary Frontal Dune* - a continuous or nearly continuous mound or ridge of sand with relatively steep seaward and landward slopes immediately landward and subject to erosion and overtopping from high tides and waves during coastal storms. The inland limit of the primary frontal dune occurs at the point where there is a distinct change from a relatively steep slope to a relatively mild slope.
40. *Recreational vehicle* - a vehicle which is: (a) built on a single chassis; (b) 400 square feet or less when measured at the largest horizontal projection; (c) designed to be self-propelled or permanently towable by a light duty truck; and (d) designed primarily not for use as a permanent dwelling, but as temporary living quarters for recreational, camping, travel, or seasonal use.
41. *Repetitive Loss* – a building covered by a contract for flood insurance that has incurred flood-related damages on 2 occasions during a 10-year period ending on the date of the event for which a second claim is made, in which

the cost of repairing the flood damage, on the average, equaled or exceeded 25% of the market value of the building at the time of each such flood event.

42. Section 1316 of the National Flood insurance Act of 1968 - The act provides that no new flood insurance shall be provided for any property found by the Federal Emergency Management Agency to have been declared by a state or local authority to be in violation of state or local ordinances.
43. Stable Natural Vegetation - the first place on the oceanfront where plants such as sea oats hold sand in place.
44. Start of construction - for other than new construction or substantial improvements under the Coastal Barrier Resources Act (P.L. 97-348), includes substantial improvement, and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, rehabilitation, addition, or improvement was within 180 days of the permit date. The actual start means the first placement of permanent construction of a structure (including a manufactured home) on a site, such as the pouring of slabs or footings, installation of piles, construction of columns, or any work beyond the stage of excavation or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading, and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for footings, piers or foundations, or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For a substantial improvement, the actual start of construction means the first alteration of any wall, ceiling, floor, or other structural part of the building, whether or not that alteration affects the external dimensions of the building.
45. Structure - a walled and roofed building, a manufactured home, including a gas or liquid storage tank that is principally above ground.
46. Subdivision - A parcel of land divided into two or more lots.
47. Substantial damage - damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred. Such repairs may be undertaken successively, and their costs counted cumulatively. Please refer to the definition of "substantial improvement".
48. Substantial improvement - any repair, reconstruction, rehabilitation, addition, or other improvement of a structure, the cost of which equals or exceeds 50 percent of the market value of the structure before the start of construction of the improvement. This term includes structures that have incurred repetitive loss or substantial damage, regardless of the actual

repair work performed. The term does not, however, include either:

- a) Any project of improvement to a structure to correct existing violations of State or local health, sanitary, or safety code specifications which have been identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions or,
- b) Any alteration of a historic structure, provided that the alteration will not preclude the structure's continued designation as a historic structure.

Permits shall be cumulative for a period of five years. If the improvement project is conducted in phases, the total of all costs associated with each phase, beginning with the issuance of the first permit, shall be utilized to determine whether "substantial improvement" will occur.

49. Substantially improved existing manufactured home park or subdivision - where the repair, reconstruction, rehabilitation or improvement of the streets, utilities and pads equals or exceeds 50 percent of the value of the streets, utilities and pads before the repair, reconstruction, or improvement commenced.

50. Variance - is a grant of relief from a term or terms of this ordinance.

51. Violation - the failure of a structure or other development to be fully compliant with these regulations.

Section 6-22. – Administration.

A. Designation of Local Floodplain Administrator -The Floodplain Manager or his/her designee is hereby appointed to administer and implement the provisions of this ordinance.

B. Adoption of Letter of Map Revisions (LOMR) - All LOMRs that are issued in the areas identified in section 6-20.D of this ordinance are hereby adopted.

C. Development Permit and Certification Requirements.

1. Development Permit: Application for a development permit shall be made to the local floodplain administrator on forms furnished by him or her prior to any development activities. The development permit may include, but not be limited to, plans in duplicate drawn to scale showing: the nature, location, dimensions, and elevations of the area in question; existing or proposed structures; and the location of fill materials, storage areas, and drainage facilities. Specifically, the following information is required:

- a) A plot plan that shows the 100-year floodplain contour or a statement that the entire lot is within the floodplain must be provided by the development permit applicant when the lot is

within or appears to be within the floodplain as mapped by the Federal Emergency Management Agency or the floodplain identified pursuant to either the section 6-22.D.10, The Use of Best Available Data or the Standards for Streams Without Estimated Base Flood Elevations and Floodways of section 6-23.C. The plot plan must be prepared by or under the direct supervision of a registered land surveyor or professional engineer and certified by it. The plot plan must show the floodway, if any, as identified by the Federal Emergency Management Agency or the floodway identified pursuant to either section 6-22.D.10, The Use of Best Available Data or the Standards for Streams Without Estimated Base Flood Elevations and Floodways of section 6-23.C.

- b) Where base flood elevation data is provided as set forth in section 6-20.D or section 6-22.D.10 the application for a development permit within the flood hazard area shall show:
- (1) The elevation (in relation to mean sea level) of the lowest floor of all new and substantially improved structures, and
 - (2) If the structure will be floodproofed in accordance with the Non-Residential Construction requirements of section 6-23.B.2 the elevation (in relation to mean sea level) to which the structure will be floodproofed.
- c) Where base flood elevation data is not provided as set forth in section 6-20.D or section 6-22.D.10, then the provisions in the Standards for Streams Without Estimated Base Flood Elevations and Floodways of section 6-23.C must be met.
- d) Alteration of Watercourse: Where any watercourse will be altered or relocated as a result of proposed development, the application for a development permit shall include a description of the extent of watercourse alteration or relocation, an engineering study to demonstrate that the flood carrying capacity of the altered or relocated watercourse is maintained and a map showing the location of the proposed watercourse alteration or relocation.

2. Certifications

- a) Floodproofing Certification - When a structure is floodproofed, the applicant shall provide certification from a registered, professional engineer or architect that the non-residential, floodproofed structure meets the floodproofing criteria in the non-residential construction requirements of section 6-23.B.2 and section 6-23.E.2.
- b) Certification During Construction - A lowest floor elevation certification is required after the lowest floor is completed. As soon as possible after completion of the lowest floor and before

any further vertical construction commences, or floodproofing by whatever construction means, whichever is applicable, it shall be the duty of the permit holder to submit to the local floodplain administrator a certification of the elevation of the lowest floor, or floodproofed elevation, whichever is applicable, as built, in relation to mean sea level. Said certification shall be prepared by or under the direct supervision of a registered land surveyor or professional engineer and certified by it. Any work done prior to submission of the certification shall be at the permit holder's risk. The local floodplain administrator shall review the floor elevation survey data submitted. The permit holder immediately and prior to further progressive work being permitted to proceed shall correct deficiencies detected by such review. Failure to submit the survey or failure to make said corrections required hereby shall because to issue a stop-work order for the project.

c) *V-Zone Certification* - When a structure is located in Zones V, VE, or V1-30, certification shall be provided from a registered professional engineer or architect, separate from submitted plans, that new construction and substantial improvement meets the criteria for the coastal high hazard areas outlined in section 6-23.F.5.

d) *As-built Certification* - Upon completion of the development a registered professional engineer or land surveyor, in accordance with SC law, shall certify according to the requirements of section 6-22.C.2a, 2b, and 2c that the development is built in accordance with the submitted plans and previous pre-development certifications.

D. Duties and Responsibilities of the Local Floodplain Administrator - shall include, but not be limited to:

1. *Permit Review* - Review all development permits to assure that the requirements of this ordinance have been satisfied.
2. *Requirement of Federal and/or state permits* - Review proposed development to assure that all necessary permits have been received from those governmental agencies from which approval is required by Federal or State law, including section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C 1334.
3. *Watercourse alterations* -
 - a) Notify adjacent communities and the South Carolina Department of Natural Resources, Land, Water, and Conservation Division, State Coordinator for the National Flood Insurance Program, prior to any alteration or relocation of a watercourse, and submit evidence of such notification to the Federal Emergency Management Agency.

- b) In addition to the notifications required for watercourse alterations per section 6-22.D.3a, written reports of maintenance records must be maintained to show that maintenance has been provided within the altered or relocated portion of said watercourse so that the flood-carrying capacity is maintained. This maintenance must consist of a comprehensive program of periodic inspections, and routine channel clearing and dredging, or other related functions. The assurance shall consist of a description of maintenance activities, frequency of performance, and the local official responsible for maintenance performance. Records shall be kept on file for FEMA inspection.
 - c) If the proposed project will modify the configuration of the watercourse and/or floodway or change the base flood elevations for which a detailed Flood Insurance Study has been developed, section 6-23.B.7. shall apply.
 - d) Within 60 days of completion of an alteration of a watercourse, referenced in the certification requirements of section 6-22.C.2.d, the applicant shall submit as-built certification, by a registered professional engineer, to the Federal Emergency Management Agency.
4. Floodway encroachments - Prevent encroachments within floodways unless the certification and flood hazard reduction provisions of section 6-23.B.5 are met.
5. Adjoining Floodplains - Cooperate with neighboring communities with respect to the management of adjoining floodplains and/or flood-related erosion areas to prevent aggravation of existing hazards.
6. Notifying Adjacent Communities - Notify adjacent communities prior to permitting substantial commercial developments and large subdivisions to be undertaken in areas of special flood hazard and/or flood-related erosion hazards.
7. Certification requirements –
- a) Obtain and review actual elevation (in relation to mean sea level) of the lowest floor of all new or substantially improved structures, in accordance with administrative procedures outlined in section 6-22.C.2.b or the coastal high hazard area requirements outlined in section 6-23.F.5.
 - b) Obtain the actual elevation (in relation to mean sea level) to which the new or substantially improved structures have been floodproofed, in accordance with the floodproofing certification outlined in section 6-22.C.2.a.
 - c) When floodproofing is utilized for a particular structure, obtain

certifications from a registered professional engineer or architect in accordance with the non-residential construction requirements outlined in section 6-23.B.2.

d) A registered professional engineer or architect shall certify that the design, specifications and plans for construction are in compliance with the provisions contained in the coastal high hazard area requirements outlined in section 6-23.F.5

8. Map Interpretation - Where interpretation is needed as to the exact location of boundaries of the areas of special flood hazard (for example, where there appears to be a conflict between a mapped boundary and actual field conditions), make the necessary interpretation. The person contesting the location of the boundary shall be given a reasonable opportunity to appeal the interpretation.
9. Prevailing Authority - Where a map boundary showing an area of special flood hazard and field elevations disagree, the base flood elevations for flood protection elevations (as found on an elevation profile, floodway data table, etc.) shall prevail. The correct information should be submitted to FEMA as per the map maintenance activity requirements outlined in section 6-23.B.7.b.
10. Use of Best Available Data - When base flood elevation data and floodway data has not been provided in accordance with section 6-20.D, obtain, review, and reasonably utilize best available base flood elevation data and floodway data available from a federal, state, or other source, including data developed pursuant to section 6-23.C.1.in order to administer the provisions of this ordinance. Data from preliminary, draft, and final Flood Insurance Studies constitutes best available data from a federal, state, or other source, which must be developed using hydraulic models meeting the minimum requirement of NFIP approved model. If an appeal is pending on the study in accordance with 44 CFR Ch. 1, Part 67.5 and 67.6, the data does not have to be used.
11. Special Flood Hazard Area/Topographic Boundaries Conflict - When the exact location of boundaries of the areas special flood hazards conflict with the current, natural topography information at the site; the site information takes precedence when the lowest adjacent grade is at or above the BFE, the property owner may apply and be approved for a Letter of Map Amendment (LOMA) by FEMA. The local floodplain administrator in the permit file will maintain a copy of the Letter of Map Amendment issued from FEMA.
12. On-Site Inspections - Make on-site inspections of projects in accordance with the administrative procedures outlined in section 6-22.E.1.
13. Administrative Notices - Serve notices of violations, issue stop-work orders, revoke permits and take corrective actions in accordance with the administrative procedures in section 6-22.E.

14. Records Maintenance - Maintain all records pertaining to the administration of this ordinance and make these records available for public inspection.
15. Annexations and Detachments - Notify the South Carolina Department of Natural Resources Land, Water and Conservation Division, State Coordinator for the National Flood Insurance Program within six (6) months of any annexations or detachments that include special flood hazard areas.
16. Federally Funded Development – All federally funded development must comply with all applicable Executive Orders. Evidence of compliance with the executive order must be submitted as part of the permit review process.
17. Substantial Damage Determination – Perform an assessment of damage from any origin to the structure to determine the percent damage, which is based on the market value of the structure before the damage occurred.
18. Substantial Improvement Determinations – Perform an assessment of permit applications for improvements or repairs (to include percent damage) to be made to a building or structure that equals or exceeds 50 percent of the market value of the structure before the start of construction. Cost of work counted for determining if and when substantial improvement to a structure occurs shall be cumulative for a period of five years. If the improvement project is conducted in phases, the total of all costs associated with each phase, beginning with the issuance of the first permit, shall be utilized to determine whether “substantial improvement” will occur.

The market values shall be determined by one of the following methods:

- a) The current assessed building value as determined by the county’s assessor’s office, or the value of an appraisal performed by a licensed appraiser at the expense of the owner within the past 6 months.
- b) One or more certified appraisals from a registered professional licensed appraiser in accordance with the laws of South Carolina. The appraisal shall indicate actual replacement value of the building or structure in its pre-improvement condition, less the cost of site improvements and depreciation for functionality and obsolescence.
- c) Real Estate purchase contract within 6 months prior to the date of the application for a permit.
- d) Computed Actual Cash Value - this value is based on the average cost of construction per square foot less the depreciation value.

E. Administrative Procedures

1. Inspections of Work in Progress - As the work pursuant to a permit progress, the local floodplain administrator shall make as many inspections of the work as may be necessary to ensure that the work is being done according to the provisions of the local ordinance and the terms of the permit. In exercising this power, the floodplain administrator has a right, upon presentation of proper credentials, to enter on any premises within the territorial jurisdiction at any reasonable hour for the purposes of inspection or other enforcement action.
2. Stop-Work Orders - Whenever a building or part thereof is being constructed, reconstructed, altered, or repaired in violation of this ordinance, the floodplain administrator may order the work to be immediately stopped. The stop-work order shall be in writing and directed to the person doing the work. The stop-work order shall state the specific work to be stopped, the specific reasons for the stoppage, and the conditions under which the work may be resumed. Violation of a stop-work order constitutes a misdemeanor.
3. Revocation of Permits - The local floodplain administrator may revoke and require the return of the development permit by notifying the permit holder in writing, stating the reason for the revocation. Permits shall be revoked for any substantial departure from the approved application, plans, or specifications; for refusal or failure to comply with the requirements of state or local laws; or for false statements or misrepresentations made in securing the permit. Any permit mistakenly issued in violation of an applicable state or local law may also be revoked.
4. Periodic Inspections - The local floodplain administrator and each member of his/her inspections department shall have a right, upon presentation of proper credentials, to enter on any premises within the territorial jurisdiction of the department at any reasonable hour for the purposes of inspection or other enforcement action. Inspections may be made during construction and post construction to ensure continued compliance with the NFIP.
5. Violations to be Corrected - When the local floodplain administrator finds violations of applicable state and local laws, it shall be his/her duty to notify the owner or occupant of the building of the violation. The owner or occupant shall immediately remedy each of the violations of law on the property he owns.
6. Actions in Event of Failure to Take Corrective Action: If the owner of a building or property shall fail to take prompt corrective action, the floodplain administrator shall give him written notice, by certified or registered mail to his last known address or by personal service, that:
 - a) The building or property is in violation of the Flood Damage Prevention Ordinance,

- b) A hearing will be held before the local floodplain administrator at a designated place and time, not later than 10 days after the date of the notice, at which time the owner shall be entitled to be heard in person or by counsel and to present arguments and evidence pertaining to the matter: and,
 - c) Following the hearing, the local floodplain administrator may issue such order to alter, vacate, or demolish the building; or to remove fill as appears appropriate.
7. Order to Take Corrective Action: If, upon a hearing held pursuant to the notice prescribed above, the floodplain administrator shall find that the building or development is in violation of the Flood Damage Prevention Ordinance, he/she shall make an order in writing to the owner, requiring the owner to remedy the violation within such period, not more than 180 days the floodplain administrator may prescribe; provided that where the floodplain administrator finds that there is imminent danger to life or other property, he may order that corrective action be taken in such lesser period as may be feasible.
8. Appeal: Any owner who has received an order to take corrective action may appeal from the order to the local elected governing body by giving notice of appeal in writing to the floodplain administrator and the clerk within 10 days following issuance of the final order. In the absence of an appeal, the order of the floodplain administrator shall be final. The local governing body shall hear an appeal within a reasonable time and may affirm, modify and affirm, or revoke the order.
9. Failure to Comply with Order: If the owner of a building or property fails to comply with an order to take corrective action from which no appeal has been taken or fails to comply with an order of the governing body following an appeal, he shall be guilty of a misdemeanor and shall be punished in the discretion of the court.
10. Denial of Flood Insurance under the NFIP: If a structure is declared in violation of this ordinance and after all other penalties are exhausted to achieve compliance with this ordinance then the local floodplain administrator shall notify the Federal Emergency Management Agency (FEMA) to initiate a Section 1316 of the National Flood insurance Act of 1968 action against the structure upon the finding that the violator refuses to bring the violation into compliance with the ordinance. Once a violation has been remedied the local floodplain administrator shall notify FEMA of the remedy and ask that the Section 1316 be rescinded.
11. The following documents are incorporated by reference and may be used by the local floodplain administrator to provide further guidance and interpretation of this ordinance as found on FEMA's website at www.fema.gov:
- a) FEMA 55 Coastal Construction Manual

- b) All FEMA Technical Bulletins
- c) All FEMA Floodplain Management Bulletins
- d) FEMA 348 Protecting Building Utilities from Flood Damage
- e) FEMA 499 Home Builder's Guide to Coastal Construction Technical Fact Sheets

Section 6-23. – Provisions for Flood Hazard Reduction

A. General Standards - Development may not occur in the Special Flood Hazard Area (SFHA) where alternative locations exist due to the inherent hazards and risks involved. Before a permit is issued, the applicant shall demonstrate that new structures cannot be located out of the SFHA and that encroachments onto the SFHA are minimized. In all areas of special flood hazard the following provisions are required:

1. Reasonably Safe from Flooding - Review all permit applications to determine whether proposed building sites will be reasonably safe from flooding.
2. Anchoring - All new construction and substantial improvements shall be anchored to prevent flotation, collapse, and lateral movement of the structure.
3. Flood Resistant Materials and Equipment - All new construction and substantial improvements shall be constructed with flood resistant materials and utility equipment resistant to flood damage in accordance with Technical Bulletin 2, Flood Damage-Resistant Materials Requirements, available from the Federal Emergency Management Agency.
4. Minimize Flood Damage - All new construction and substantial improvements shall be constructed by methods and practices that minimize flood damages.
5. Critical Development – All new construction and substantial improvements that meet the definition of critical development shall be elevated to the 500-year flood elevation or be elevated to the highest known historical flood elevation (where records are available), whichever is greater. If no data exists establishing the 500-year flood elevation or the highest known historical flood elevation, the applicant shall provide a hydrologic and hydraulic engineering analysis that generates 500-year flood elevation data.
6. Utilities - Electrical, ventilation, plumbing, heating and air conditioning equipment (including ductwork), and other service facilities shall be designed and/or located to prevent water from entering or accumulating

within the components during conditions of the base flood plus one foot.

7. *Water Supply Systems* - All new and replacement water supply systems shall be designed to minimize or eliminate infiltration of floodwaters into the system.
8. *Sanitary Sewage Systems* – New and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of floodwaters into the systems and discharges from the systems into floodwaters. On-site waste disposal systems shall be located and constructed to avoid impairment to them or contamination from them during flooding.
9. *Gas or Liquid Storage Tanks* – All gas or liquid storage tanks, either located above ground or buried, shall be anchored to prevent floatation and lateral movement resulting from hydrodynamic and hydrostatic loads.
10. *Alteration, Repair, Reconstruction, or Improvements* - Any alteration, repair, reconstruction, or improvement to a structure that is in compliance with the provisions of this ordinance, shall meet the requirements of "new construction" as contained in this ordinance. This includes post-FIRM development and structures.
11. *Non-Conforming Buildings or Uses* - Non-conforming buildings or uses, including historic structures, may not be enlarged, replaced, or rebuilt unless such enlargement or reconstruction is accomplished in conformance with the provisions of this ordinance.
12. *American with Disabilities Act (ADA)* - A building must meet the specific standards for floodplain construction outlined in section 6-23.B, as well as any applicable ADA requirements. The ADA is not justification for issuing a variance or otherwise waiving these requirements. Also, the cost of improvements required to meet the ADA provisions shall be included in the costs of the improvements for calculating substantial improvement.

B. *Specific Standards* - In all areas of special flood hazard (Zones A, AE, AH, AO, A1-30 unless otherwise specified) where base flood elevation data has been provided, as set forth in section 6-20.D or section 6-22.D.10, the following provisions are required:

1. *Residential Construction* - New construction and substantial improvement of any residential structure (including manufactured homes) shall have the lowest floor elevated no lower than one foot above the base flood elevation. No basements are permitted. Should solid foundation perimeter walls be used to elevate a structure, flood openings sufficient to automatically equalize hydrostatic flood forces, shall be provided in accordance with the elevated buildings requirements in section 6-23 B.4.
2. *Non-Residential Construction*
 - a) New construction and substantial improvement of any

commercial, industrial, or non-residential structure (including manufactured homes) shall have the lowest floor elevated no lower than one foot above the level of the base flood elevation. Should solid foundation perimeter walls be used to elevate a structure, flood openings sufficient to automatically equalize hydrostatic flood forces, shall be provided in accordance with the elevated buildings requirements in section 6-23 B.4. No basements are permitted. Structures located in A-Zones may be floodproofed in lieu of elevation provided that all areas of the structure below the required elevation are watertight with walls substantially impermeable to the passage of water, using structural components having the capability of resisting hydrostatic and hydrodynamic loads and the effect of buoyancy.

b) A registered, professional engineer or architect shall certify that the standards of this subsection are satisfied. Such certifications shall be provided to the official as set forth in the floodproofing certification requirements in section 6-22.C.2.a. A variance may be considered for wet-floodproofing agricultural structures in accordance with the criteria outlined in Article V.E of this ordinance. Agricultural structures not meeting the criteria of Article V.E must meet the non-residential construction standards and all other applicable provisions of this ordinance. Structures that are floodproofed are required to have an approved maintenance plan with an annual exercise. The local floodplain administrator must approve the maintenance plan and receive notification of the annual exercise.

3. *Manufactured Homes*

a) Manufactured homes that are placed or substantially improved on sites outside a manufactured home park or subdivision, in a new manufactured home park or sub-division, in an expansion to an existing manufactured home park or subdivision, or in an existing manufactured home park or subdivision on which a manufactured home has incurred "substantial damage" as the result of a flood, must be elevated on a permanent foundation such that the lowest floor of the manufactured home is elevated no lower than one foot above the base flood elevation and be securely anchored to an adequately anchored foundation system to resist flotation, collapse, and lateral movement.

b) Manufactured homes that are to be placed or substantially improved on sites in an existing manufactured home park or subdivision that are not subject to the provisions for residential construction in section 6-23.B.3.a of this ordinance must be elevated so that either:

(1) The lowest floor of the manufactured home is elevated no lower than one foot above the base flood elevation, or

(2) The manufactured home chassis is supported by reinforced piers or other foundation elements of at least equivalent strength that are no less than 36 inches in height above grade and be securely anchored to an adequately anchored foundation system to resist flotation, collapse, and lateral movement or in accordance with Section 40-29 of the *South Carolina Manufactured Housing Board Regulations* and SC Regulations Sec. 79-42, whichever is more restrictive.

c) An evacuation plan must be developed for evacuation of all residents of all new, substantially improved or substantially damaged manufactured home parks or subdivisions located within areas of special flood hazard. This plan shall be filed with and approved by the local floodplain administrator and the local emergency manager.

4. *Elevated Buildings* - New construction and substantial improvements of elevated buildings that include fully enclosed areas below the lowest floor that are usable solely for the parking of vehicles, building access, or limited storage in an area other than a basement, and which are subject to flooding shall be designed to preclude finished space and be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters.

a) Designs for complying with this requirement must either be certified by a professional engineer or architect or meet or exceed all of the following minimum criteria:

(1) Provide a minimum of two openings on different walls having a total net area of not less than one square inch for every square foot of enclosed area.

(2) The bottom of each opening must be no more than 1 foot above the higher of the interior or exterior grade immediately under the opening.

(3) Only the portions of openings that are below the base flood elevation (BFE) plus freeboard can be counted towards the required net open area. If the Lowest Adjacent Grade (LAG) is between the BFE and the freeboard, openings are still required until a LOMA has been approved.

(4) Openings may be equipped with screens, louvers, valves, or other coverings or devices provided they permit the automatic flow of floodwaters in both directions.

(5) Fill placed around foundation walls must be graded so that the grade inside the enclosed area is equal to or higher than the adjacent grade outside the building on at least one side

of the building.

b) *Hazardous Velocities* - Hydrodynamic pressure must be considered in the design of any foundation system where velocity waters or the potential for debris flow exists. If flood velocities are excessive (greater than 5 feet per second), foundation systems other than solid foundations walls should be considered so that obstructions to damaging flood flows are minimized.

c) *Enclosures Below Lowest Floor*

(1) Access to the enclosed area shall be the minimum necessary to allow for parking of vehicles (garage door) or limited storage of maintenance equipment used in connection with the premises (standard exterior door) or entry to the living area (stairway or elevator).

(2) The interior portion of such enclosed area shall be unfinished or finished with flood resistant material and not partitioned into separate rooms, must be void of utilities except for essential lighting as required for safety, and cannot be temperature controlled. A ground fault interrupt breaker may be installed below the required lowest floor elevation specified in the specific standards outlined in section 6-23.B.1, 2 and 3.

(3) All construction materials below the required lowest floor elevation specified in the specific standards outlined in section 6-23.B 1, 2, 3 and 4 should be of flood resistant materials.

5. *Floodways* - Located within areas of special flood hazard established in section 6-20.D, are areas designated as floodways. The floodway is an extremely hazardous area due to the velocity of floodwaters that carry debris and potential projectiles and has erosion potential. The following provisions shall apply within such areas:

a) No encroachments, including fill, new construction, substantial improvements, additions, and other developments shall be permitted unless:

(1) It has been demonstrated through hydrologic and hydraulic analyses performed in accordance with standard engineering practice that the proposed encroachment would not result in any impact of the flood levels during the occurrence of the base flood. Such certification and technical data shall be presented to the local floodplain administrator, OR:

(2) A Conditional Letter of Map revision (CLOMR) has been

approved by FEMA. A Letter of Map Revision must be obtained upon completion of the proposed development.

- b) If section 6-23.B.5a is satisfied, all new construction and substantial improvements shall comply with all applicable flood hazard reduction provisions of section 6-23.
- c) A replacement manufactured home may be allowed provided the anchoring and the elevation standards of section 6-23 B.3 and the encroachment standards of section 6-23.B.5(a) may apply except when the replacement manufactured home is the same size as the existing.
- d) Permissible uses within floodways may include general farming, pasture, outdoor plant nurseries, horticulture, forestry, wildlife sanctuary, game farm, and other similar agricultural, wildlife, and related uses. Also, lawns, gardens, play areas, picnic grounds, and hiking and horseback riding trails are acceptable uses, provided that they do not employ structures or fill. Substantial development of a permissible use may require a no-impact certification. The uses listed in this subsection are permissible only if and to the extent that they do not cause any increase in base flood elevations or changes to the floodway configuration.

6. Recreational Vehicles

- a) A recreational vehicle is ready for highway use if it is:
 - (1) On wheels or jacking system,
 - (2) Attached to the site only by quick-disconnect type utilities and security devices; and
 - (3) Has no permanently attached additions.
- b) Recreational vehicles placed on sites shall either be:
 - (1) On site for fewer than 180 consecutive days;
 - (2) Be fully licensed and ready for highway use, or
 - (3) Meet the development permit and certification requirements of section 6-22.D, general standards outlined in section 6-23.A, and manufactured homes standards in section 6-23.B.3 and B.4.

7. Map Maintenance Activities - The National Flood Insurance Program (NFIP) requires flood data to be reviewed and approved by FEMA. This ensures that flood maps, studies and other data identified in section 6-20.D accurately represent flooding conditions so appropriate floodplain

management criteria are based on current data. The following map maintenance activities are identified and shall apply to all areas of special flood hazard:

a) Requirement to Submit New Technical Data

(1) For all development proposals that impact floodway/floodplain delineations or base flood elevations, the community shall ensure that a Letter of Map Revision reflecting the impacts be submitted to FEMA as soon as practicable, but no later than six months from the end of construction of the impact. These development proposals include but not limited to:

(a) Floodway encroachments that increase or decrease base flood elevations or alter floodway boundaries;

(b) Fill sites to be used for the placement of proposed structures where the applicant desires to remove the site from the special flood hazard area;

(c) Alteration of watercourses that result in a relocation or elimination of the special flood hazard area, including stream restoration and the placement of culverts; and

(d) Subdivision or large-scale development proposals requiring the establishment of base flood elevations in accordance with section 6-23.C.1.

(e) Any development that will alter the boundaries of the area of special flood hazard.

(2) It is the responsibility of the applicant to have technical data, required in accordance with section 6-23.B.7, prepared in a format required for a Conditional Letter of Map Revision or Letter of Map Revision, and submitted to FEMA. Submittal and processing fees for these map revisions shall also be the responsibility of the applicant.

(3) The local floodplain administrator shall require a Conditional Letter of Map Revision prior to the issuance of a floodplain development permit for:

(a) Proposed floodway encroachments that increase the base flood elevation, OR

(b) Proposed development which increases the base flood elevation by more than one foot in areas where FEMA has provided base flood elevations

but no floodway.

(4) The local floodplain administrator may require a Conditional Letter of Map Revision for any development that they want the impacts to be evaluated prior to issuance of a permit.

(5) Floodplain development permits issued by the local floodplain administrator shall be conditioned upon the applicant obtaining a Letter of Map Revision from FEMA for any development proposal subject to section 6-23 B.7.

b) *Right to Submit New Technical Data* - The floodplain administrator may request changes to any of the information shown on an effective map that does not impact floodplain or floodway delineations or base flood elevations, such as labeling or planimetric details. Such a submission shall include appropriate supporting documentation made in writing by the local jurisdiction and may be submitted at any time.

8. *Accessory Structures* – Detached accessory structures used only for parking of vehicles and storage are permitted at grade if:

a) In special flood hazard areas other than coastal high hazard areas (Zones A, AE, AH, AO and A1-30), they are not larger than one-story and 100 square feet in area. Walls must have openings in compliance with section 6-23.B.4.(a).

b) In coastal high hazard areas (Zones V, VE, V1-30 and VO) they are not larger than 100 square feet and in compliance with section 6-23.F.

c) Anchored to resist flotation, collapse, and lateral movement.

d) Flood damage resistant materials used below the base elevation in accordance with Technical Bulletin 2, Flood Damage Resistant Materials Requirement.

e) Mechanical, electrical, and utility equipment comply with the requirements of section 6-23.A. 6.

f) Accessory structures shall be designed to have low flood damage potential.

g) Accessory structures shall be constructed and placed on the building site to offer the minimum resistance to the flow of floodwaters.

9. *Swimming Pool Utility Equipment Rooms* - If the building cannot be built at or above the BFE, because of functionality of the equipment then a structure to house the utilities for the pool may be built below the BFE

with the following provisions:

- a) Meet the requirements for accessory structures in section 6-23.B.8.
- b) The utilities must be anchored to prevent flotation and shall be designed to prevent water from entering or accumulating within the components during conditions of the base flood.

10. Elevators

- a) Install a float switch system or another system that provides the same level of safety necessary for all elevators where there is a potential for the elevator cab to descend below the BFE during a flood per FEMA's Technical Bulletin 4 Elevator Installation for Buildings Located in Special Flood Hazard Areas.
- b) All equipment that may have to be installed below the BFE such as counterweight roller guides, compensation cable and pulleys, and oil buffers for traction elevators and the jack assembly for a hydraulic elevator must be constructed using flood-resistant materials where possible per FEMA's Technical Bulletin 4 Elevator Installation for Buildings Located in Special Flood Hazard Areas.

11. Fill - An applicant shall demonstrate that fill is the only alternative to raising the building to meet the residential and non-residential construction requirements of section 6-23 B(1) or B (2), and that the amount of fill used will not affect the flood storage capacity or adversely affect adjacent properties. The following provisions shall apply to all fill placed in the special flood hazard area:

- a) Fill may not be placed in the floodway unless it is in accordance with the requirements in section 6-23.B.5a.
- b) Fill may not be placed in tidal or non-tidal wetlands without the required state and federal permits.
- c) Fill must consist of soil and rock materials only. A registered professional geotechnical engineer may use dredged material as fill only upon certification of suitability. Landfills, rubble fills, dumps, and sanitary fills are not permitted in the floodplain.
- d) Fill used to support structures must comply with ASTM Standard D-698, and its suitability to support structures certified by a registered, professional engineer.
- e) Fill slopes shall be no greater than two horizontal to one vertical. Flatter slopes may be required where velocities may result in erosion.

- f) The use of fill shall not increase flooding or cause drainage problems on neighboring properties.
- g) Fill may not be used for structural support in the coastal high hazard areas.
- h) Shall meet the requirements of FEMA Technical Bulletin 10, Ensuring That Structures Built On Fill In or Near Special Flood Hazard Areas Are Reasonably Safe From Flooding.

12. Standards for Subdivision Proposals and Other Development

- a) All subdivision proposals and other proposed new development shall be consistent with the need to minimize flood damage and are subject to all applicable standards in these regulations.
- b) All subdivision proposals and other proposed new development shall have public utilities and facilities such as sewer, gas, electrical, and water systems located and constructed to minimize flood damage.
- c) All subdivision proposals and other proposed new development shall have adequate drainage provided to reduce exposure to flood damage.
- d) The applicant shall meet the requirement to submit technical data to FEMA in section 6-23 B.7 when a hydrologic and hydraulic analysis is completed that generates base flood elevations.

C. Standards for Streams without Established Base Flood Elevations and Floodways - Located within the areas of special flood hazard (Zones A and V) established in section 6-20.D, are small streams where no base flood data has been provided and where no floodways have been identified. The following provisions apply within such areas:

1. In all areas of special flood hazard where base flood elevation data are not available, the applicant shall provide a hydrologic and hydraulic engineering analysis that generates base flood elevations for all subdivision proposals and other proposed developments containing at least 50 lots or 5 acres, whichever is less.
2. No encroachments, including fill, new construction, substantial improvements, and new development shall be permitted within 100 feet of the stream bank unless certification with supporting technical data by a registered professional engineer is provided demonstrating that such encroachments shall not result in any increase in flood levels during the occurrence of the base flood discharge.
3. If section 6-23.C.1 is satisfied and base flood elevation data is available from other sources, all new construction and substantial improvements

within such areas shall comply with all applicable flood hazard ordinance provisions of section 6-23 and shall be elevated or floodproofed in accordance with elevations established in accordance with section 6-22.D.10.

4. Data from preliminary, and draft Flood Insurance Studies constitutes best available data. Refer to FEMA Floodplain Management Technical Bulletin 1-98, Use of Flood Insurance Study (FIS) Data as Available Data. If an appeal is pending on the study in accordance with 44 CFR Ch. 1, Part 67.5 and 67.6, the data does not have to be used.
5. When base flood elevation (BFE) data is not available from a federal, state, or other source one of the following methods must be used to determine a BFE in Approximate Zone A Areas:
 - a) *Contour Interpolation*
 - (1) Superimpose approximate Zone A boundaries onto a topographic map and estimate a BFE.
 - (2) Add one-half of the contour interval of the topographic map that is used to the BFE.
 - b) *Data Extrapolation* - A BFE can be determined if a site within 500 feet upstream of the project site has a full detailed study for which a 100-year profile has been computed, and the floodplain and channel bottom slope characteristics are relatively similar to the downstream reaches. No hydraulic structures shall be present.
 - c) *Hydrologic and Hydraulic Calculations*- Perform hydrologic and hydraulic calculations to determine BFEs using FEMA approved methods and software.
 - d) *A Zone Model* – A BFE can be pulled from the model and applied if determined that the BFE is useable.

D. Standards for Streams with Established Base Flood Elevations but without Floodways - Along rivers and streams where Base Flood Elevation (BFE) data is provided but no floodway is identified for a Special Flood Hazard Area on the FIRM or in the FIS.

1. No encroachments including fill, new construction, substantial improvements, or other development shall be permitted unless certification with supporting technical data by a registered professional engineer is provided demonstrating that the cumulative effect of the proposed development, when combined with all other existing and anticipated development, will not increase the water surface elevation of the base flood more than one foot at any point within the community.

E. Standards for Areas of Shallow Flooding (AO Zones) - Located within the areas

of special flood hazard established in Article 1.D, are areas designated as shallow flooding. The following provisions shall apply within such areas:

1. All new construction and substantial improvements of residential structures shall have the lowest floor elevated to at least as high as the depth number specified on the Flood Insurance Rate Map, in feet, above the highest adjacent grade. If no depth number is specified, the lowest floor shall be elevated at least three (3) feet above the highest adjacent grade.
2. All new construction and substantial improvements of non-residential structures shall:
 - a) Have the lowest floor elevated to at least as high as the depth number specified on the Flood Insurance Rate Map, in feet, above the highest adjacent grade. If no depth number is specified, the lowest floor shall be elevated at least three (3) feet above the highest adjacent grade; or,
 - b) Be completely flood-proofed together with attendant utility and sanitary facilities to or above that level so that any space below that level is watertight with walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy. Certification is required as stated in section 6-22.C.
3. All structures on slopes must have drainage paths around them to guide water away from the structures.

F. Coastal High Hazard Areas (V-Zones) - Located within the areas of special flood hazard established in section 6-20.D are areas designated as coastal high hazard areas. These areas have special flood hazards associated with wave wash. The following provisions shall apply within such areas:

1. All new construction and substantial improvements shall be located landward of the reach of mean high tide, first line of stable natural vegetation and comply with all applicable Department of Health and Environmental Control (DHEC) Ocean and Coastal Resource Management (OCRM) setback requirements.
2. All new construction and substantial improvements shall be elevated so that the bottom of the lowest supporting horizontal structural member (excluding pilings or columns) of the lowest floor is located no lower than feet above the base flood elevation.
3. All buildings or structures shall be securely anchored on pilings or columns, extending vertically below a grade of sufficient depth and the zone of potential scour, and securely anchored to the subsoil strata.

4. All pilings, columns and the attached structures shall be anchored to resist flotation, collapse, lateral movement and scour due to the effect of wind and water loads acting simultaneously on all building components.
5. A registered professional engineer or architect shall certify that the design, specifications and plans for construction are in compliance with the provisions contained in section 6-23.F. 2, 3, 4, 6, and 8 of this ordinance.
6. There shall be no fill used as structural support. Non-compacted fill may be used around the perimeter of a building for landscaping/aesthetic purposes provided the fill will wash out from storm surge, thereby rendering the building free of obstruction prior to generating excessive loading forces, ramping effects, or wave deflection. Only beach compatible sand may be used. The local floodplain administrator shall approve design plans for landscaping/ aesthetic fill only after the applicant has provided an analysis by an engineer, architect, and/or soil scientist that demonstrates that the following factors have been fully considered:
 - a) Particle composition of fill material does not have a tendency for excessive natural compaction.
 - b) Volume and distribution of fill will not cause wave deflection to adjacent properties; and
 - c) Slope of fill will not cause wave run-up or ramping.
7. There shall be no alteration of sand dunes that would increase potential flood damage.
8. All new construction and substantial improvements have the space below the lowest floor either free of obstruction or constructed with non-supporting breakaway walls, open wood latticework, or insect screening intended to collapse under wind and water loads without causing collapse, displacement, or other structural damage to the elevated portion of the building or supporting foundation system. Breakaway wall enclosures shall not exceed 299 square feet. Only flood resistant materials shall be used below the required flood elevation specified in section 6-23.B. A ground fault interrupt breaker may be installed below the required lowest floor elevation specified in section 6-23.B. Use of breakaway walls may be permitted only if a registered professional engineer or architect certifies that the designs proposed meet the following conditions:
 - a) Breakaway wall collapse shall result from water load less than that which would occur during the base flood.
 - b) The elevated portion of the building and supporting foundation system shall not be subject to collapse, displacement, or other structural damage due to the effects of wind and water loads acting simultaneously on all building components (structural and nonstructural). The water loading shall be those values associated

with the base flood. The wind loading values shall be those required by applicable IBC International Building Code.

- c) Such enclosed space shall be useable solely for parking of vehicles, building access, or storage. Such space shall not be used for human habitation, finished, or partitioned into multiple rooms, or temperature controlled.
9. No manufactured homes shall be permitted except in an existing manufactured home park or subdivision. A replacement manufactured home may be placed on a lot in an existing manufactured home park or subdivision provided the anchoring and elevation standards of section 6-23.B.3.
 10. Recreational vehicles shall be permitted in Coastal High Hazard Areas provided that they meet the Recreational Vehicle criteria of section 6-23.B.6.
 11. Accessory structures below the required lowest floor elevation specified in section 6-23.F.2, are prohibited except for the following:
 - a) Structures 100 square feet or less and in accordance with section 6-23.B.8.
 - b) Swimming Pools
 - (1) They are installed at-grade or elevated so long as the pool will not act as an obstruction.
 - (2) They must be structurally independent of the building and its foundation.
 - (3) They may be placed beneath a coastal building only if the top of the pool and any accompanying decking or walkway are flush with the existing grade and only if the lower area remains unenclosed.
 - (4) As part of the certification process for V-zone buildings the design professional must consider the effects that any of these elements will have on the building in question and any nearby buildings.
 - c) Access Stairs Attached to or Beneath an Elevated Building:
 - (1) Must be constructed of flood-resistant materials.
 - (2) Must be constructed as open staircases so they do not block flow under the structure in accordance with section 6-23.F.2 or if enclosed then constructed in accordance with section 6-23.F.8.

d) Decks

- (1) If the deck is structurally attached to a building, then the bottom of the lowest horizontal member must be at or above the elevation of the building's lowest horizontal member.
- (2) If the deck is to be built below the BFE then it must be structurally independent of the main building and must not cause an obstruction.
- (3) If an at-grade, structurally independent deck is proposed then a design professional must evaluate the design to determine if it will adversely affect the building and nearby buildings.

12. Parking areas should be located on a stable grade under or landward of a structure.

13. Electrical, ventilation, plumbing, heating and air conditioning equipment (including ductwork), and other service facilities shall be designed and/or located to prevent water from entering or accumulating within the components during conditions of base flood event plus one foot. This requirement does not exclude the installation of outdoor faucets for shower heads, sinks, hoses, etc., as long as cut off devices and back flow prevention devices are installed to prevent contamination to the service components and thereby minimize any flood damages to the building. No utilities or components shall be attached to breakaway walls.

Section 6-24. – Variance Procedures

- A. Establishment of Appeal Board - The Board of Zoning Appeals as established by the City of North Myrtle Beach shall hear and decide requests for variances from the requirements of this ordinance.
- B. Right to Appeal - Any person aggrieved by the decision of the appeal board, or any taxpayer may appeal such decision to the Court.
- C. Historic Structures - Variances may be issued for the repair or rehabilitation of historic structures upon the determination that the proposed repair or rehabilitation will not preclude the structure's continued designation as a historic structure and the variance is the minimum necessary to preserve the historic character and design of the structure.
- D. Functionally Dependent Uses - Variances may be issued for development necessary for the conduct of a functionally dependent use, provided the criteria of this Article are met, no reasonable alternative exist, and the development is protected by methods that minimize flood damage and create no additional threat to public safety.

E. *Accessory Structures and Agricultural Structures* - A variance is authorized to be issued for the construction or substantial improvement of accessory structures and agricultural structures provided the requirements of this section and the following are satisfied:

1. *Accessory structures.* A determination that the proposed accessory structure:
 - a) Represents a minimal investment and has low damage potential (amount of physical damage, contents damage, and loss of function).
 - b) Is larger than the size limits specified in section 6-23.B.8.
 - c) Complies with the wet floodproofing construction requirement of paragraph E.3. below.

2. *Agricultural structures.* A determination that the proposed agricultural structure:
 - a) Is used exclusively in connection with the production, harvesting, storage, raising, or drying of agricultural commodities and livestock, or storage of tools or equipment used in connection with these purposes or uses, and will be restricted to such exclusive uses.
 - b) Has low damage potential (amount of physical damage, contents damage, and loss of function).
 - c) Does not increase risks and pose a danger to public health, safety, and welfare if flooded and contents are released, including but not limited to the effects of flooding on manure storage, livestock confinement operations, liquified natural gas terminals, and production and storage of highly volatile, toxic, or water-reactive materials.
 - d) Complies with the wet floodproofing construction requirements of paragraph E.3. below.

3. *Wet floodproofing construction requirements.* Wet floodproofed structures shall:
 - a) Be anchored to resist flotation, collapse, and lateral movement.
 - b) Have flood damage resistant materials below the base flood elevation built in accordance with Technical Bulletin 2, Flood Damage Resistant Materials Requirement.
 - c) Have mechanical, electrical, and utility equipment in compliance with the requirements of section 6-23.A.6.
 - d) In special flood hazards area, have flood openings in compliance with the requirements of section 6-23.B.4.(a).

4. Variances shall not be allowed in Coastal High Hazard Areas.

F. Considerations - In passing upon such applications, the appeal board shall consider all technical evaluations, all relevant factors, all standards specified in other sections of this ordinance, and:

1. The danger that materials may be swept onto other lands to the injury of others;
2. The danger to life and property due to flooding or erosion damage, and the safety of access to the property in times of flood for ordinary and emergency vehicles;
3. The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owner;
4. The importance of the services provided by the proposed facility to the community;
5. The necessity to the facility of a waterfront location, where applicable;
6. The availability of alternative locations, not subject to flooding or erosion damage, for the proposed use;
7. The compatibility of the proposed use with existing and anticipated development, and the relationship of the proposed use to the comprehensive plan and floodplain management program for that area;
8. The expected heights, velocity, duration, rate of rise, and sediment transport of the floodwaters and the effects of wave action, if applicable, expected at the site;
9. The costs of providing governmental services during and after flood conditions including maintenance and repair of public utilities and facilities such as sewer, gas, electrical and water systems, and streets and bridges; and

G. Findings - Findings listed above shall be submitted to the appeal board, in writing, and included in the application for a variance. Additionally, comments from the Department of Natural Resources, Land, Water and Conservation Division, State Coordinator's Office, may be provided to the appeal board upon request and included in the permit file.

H. Floodways - Variances shall not be issued within any designated floodway if any increase in flood levels during the base flood discharge would result unless a CLOMR is obtained prior to issuance of the variance. To ensure the project is built in compliance with the CLOMR for which the variance is granted, the applicant must provide a bond for 100% of the cost to perform the development.

I. Conditions - Upon consideration of the factors listed above and the purposes of this ordinance, the appeal board may attach such conditions to the granting of

variances as it deems necessary to further the purposes of this ordinance. The following conditions shall apply to all variances:

1. Variances to this ordinance may not be issued when the variance will make the structure in violation of other federal, state, or local laws, regulations, or ordinances.
2. Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.
3. Variances shall only be issued upon a showing of good and sufficient cause, a determination that failure to grant the variance would result in exceptional hardship, and a determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisance, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.
4. Any applicant to whom a variance is granted shall be given written notice specifying the difference between the base flood elevation (BFE) and the elevation to which the structure is to be built and a written statement that the cost of flood insurance will be commensurate with the increased risk. Such notification shall be maintained with a record of all variance actions.
5. The local floodplain administrator shall maintain the records of all appeal actions and report any variances to the Federal Emergency Management Agency (FEMA) upon request.
6. Variances shall not be issued for unpermitted development or other development that is not in compliance with the provisions of this ordinance. Violations must be corrected in accordance with section 6-22.E. of this ordinance.

Section 6-25. – Legal Status Provisions

- A. *Effect on Rights and Liabilities under the Existing Flood Damage Prevention Ordinance* - This Ordinance in part comes forward by re-enactment of some of the provisions of the flood damage prevention ordinance enacted (previous ordinance adoption date) and it is not the intention to repeal but rather to re-enact and continue to enforce without interruption of such existing provisions, so that all rights and liabilities that have accrued there under are reserved and may be enforced. The enactment of this ordinance shall not affect any action, suit or proceeding instituted or pending. All provisions of the flood damage prevention ordinance of City of North Myrtle Beach enacted on March 15, 1983, as amended, which are not reenacted herein, are repealed.
- B. *Effect upon Outstanding Building Permits* - Nothing herein contained shall require any change in the plans, construction, size or designated use of any building, structure or part thereof for which a building permit has been granted by the Chief Building Inspector or his authorized agents before the time of passage

of this ordinance; provided, however, that when start of construction has not begun under such outstanding permit before the passage of this ordinance, construction or use shall be in conformity with the provisions of this ordinance.

C. *Effective Date* -This ordinance shall become effective on December 16, 2021.

DONE, RATIFIED AND PASSED, THIS _____ DAY OF _____, 2021.
